For more information, see the website <http://www.usf.edu/cbcs/baker-act/>, email bakeract@usf.edu, or call the Baker Act Reporting Center at 813-974-1010.

The following people contributed to the draft of this report submitted to the Department: Annette Christy, PhD, Kavitha Gopalakrishnan, MS, Kevin Jenkins, AS, Lillian Deaton, BA, Sara Rhode, LCSW, Sarah Bogovic, BA, Jordyn Lord, OHM, and Nathan Gibson, BS. Data were entered in FY 2023-2024 by several of these people and USF undergraduate students Adrian Reyes-Alzate, Livia Gabricio Hertel, and Anna Moffitt, BA.

This report is formatted as specified in the *Department of Children and Families Communication and Style Guide* (February 2023)

This document may be reproduced in whole or in part without restriction, provided that the Baker Act Reporting Center, University of South Florida, is credited for the work.

I. Introduction

Every state has a law that addresses voluntary and involuntary examination and longer-term voluntary and involuntary treatment for mental illness. Florida's mental health statute is referred to as the Baker Act (Ch.394 F.S.). It is named after Maxine Baker, the legislator, who in 1971 wrote the first version of the Baker Act.¹ Section 394.463 (2)(e), F.S., requires the Florida Department of Children and Families (Department) to receive and maintain copies of certain forms related to involuntary examinations (Baker Act), certain documents related to involuntary inpatient placement and involuntary outpatient service. This statute also requires the Department to produce an annual report analyzing the data obtained from these documents. Rule 65E-5.280, Florida Administrative Code, specifies the document and data submission process. The Department provides free online Baker Act training and a Baker Act Manual. A flow chart of the processes in the Baker Act relevant to this report is in Appendix A.

The data used for this report were entered from the document types listed in Table 1. Data from involuntary examination forms are entered into the Department's Baker Act Data Collection System (BADCS) by Baker Act Reporting Center staff as of July 1, 2023. Data from involuntary examination forms were entered from forms mailed or securely uploaded to the Baker Act Reporting Center prior to July 1, 2023. The Baker Act Reporting Center continues to enter data from documents securely uploaded to Center by the Clerks of Courts. Templates of the forms listed in Table 1 are located on the Department's Baker Act Forms web page.

The counts in this report differ from the Baker Act Dashboard because the report is based on point-in-time data provided in July 2024, while the dashboard offers near-real-time data, including later entries from receiving facilities. These data are needed soon after the end of the fiscal year to provide sufficient time to produce the report draft and ensure timely publication by the statutorily required deadline of November 30th. The dashboard allows for more current and dynamic opportunities for analysis compared to the point-in-time data used in the report.

Table 1: Document Submission Requirements and Data Entry

Involuntary Examination Forms from Baker Act Receiving Facilities	
CF-MH 3118*	Baker Act Data Collection Form
CF-MH 3052a	Report of Law Enforcement Officer Initiating Involuntary Examination
CF-MH 3052b	Certificate of Professional Initiating Involuntary Examination
CF-MH 3001	Ex Parte Court Order for Involuntary Examination
CF-MH 3100**	Transportation to the Receiving Facility
Involuntary Placement/Services Related Documents from Clerks of Court	
CF-MH 3032	Petition for Involuntary Inpatient Placement
CF-MH 3008	Order for Involuntary Inpatient Placement
CF-MH 3130	Petition for Involuntary Outpatient Services
CF-MH 3155	Order for Involuntary Outpatient Services or Continued Involuntary Outpatient Services
CF-MH 3145	Proposed Individualized Treatment Plan for Involuntary Outpatient Services and Continued Involuntary Outpatient Services

*With the implementation of the BADCS statewide on 7/1/2023, Baker Act receiving facilities are no longer required to complete this form. However, certain data elements from this form are entered into the BADCS.

**A change in Chapter 394, F.S. in 2022 required Baker Act receiving facilities to submit this form to the Department, although no data are currently entered into the BADCS from this form. F.A.C. 65E-5 provides guidance about data entry and document uploading to the Department's BADCS. Additional details about the BADCS are contained on the Department's website for the BADCS, which includes the Baker Act Submission User Manual.

Repeated Involuntary Examinations

*Some percentages do not sum to 100% due to rounding or missing data.

**Hispanic origin was collected separately from race; federal policy states that Hispanic individuals can be of any race.

III. Involuntary Examinations

In Fiscal Year (FY) 2023-2024, **161,576** involuntary examinations were conducted for **107,560** individuals.² The number of involuntary examinations is shown for five years for all ages (Table 2a). From FY 2022-2023 to FY 2023-2024 involuntary examinations decreased seven percent and the number of individuals with involuntary examinations decreased four percent. From FY 2019-2020 to FY 2023-2024 involuntary examinations decreased 20 percent and individuals with involuntary examinations decreased 16 percent.³ Counts and percentages for children and more refined age groups for adults are shown in Table 2b.

Table 2a: Involuntary Examinations Across Five Fiscal Years

Fiscal Year	Involuntary Examinations
2023-2024	161,576
2022-2023	173,721
2021-2022	170,048
2020-2021	194,680
2019-2020	202,598

Table 2b: Involuntary Examinations for Five Fiscal Years by Age Sub-Groups

Fiscal Year	Involuntary Examinations		Fiscal Year	Involuntary Examinations	
	Counts	% Age Group out of Total Examinations		Counts	% Age Group out of Total Examinations
Children (<18)⁴			Adults 25-64		
2023-2024	29,612	18.33%	2023-2024	98,848	61.18%
2022-2023	33,685	19.39%	2022-2023	104,831	60.34%
2021-2022	34,234	20.13%	2021-2022	100,559	59.14%
2020-2021	38,557	19.81%	2020-2021	115,359	59.26%
2019-2020	35,965	17.75%	2019-2020	124,474	61.44%
Adults 18-24			Adults 65+		
2023-2024	20,029	12.40%	2023-2024	11,697	7.22%
2022-2023	21,519	12.39%	2022-2023	12,131	6.98%
2021-2022	21,823	12.83%	2021-2022	11,606	6.83%
2020-2021	24,699	12.69%	2020-2021	13,288	6.83%
2019-2020	25,051	12.36%	2019-2020	14,789	7.30%

² Note that the counts in this report are slightly different than the counts you will see on the [Department's Baker Act Dashboard](#). Additional details about this difference are in Appendix B on page 26.

³ Note that the **date the involuntary examination was initiated** was used to categorize involuntary examinations by date for FY 2019-2020, FY 2020-2021, and FY 2021-2022, while new data system (BADCS) requires the entry of the **date the person arrived** at the facility but not the date the involuntary examination was initiated. The date the person arrived at the receiving facility was used from FY 2022-2023 forward in time to categorize by date.

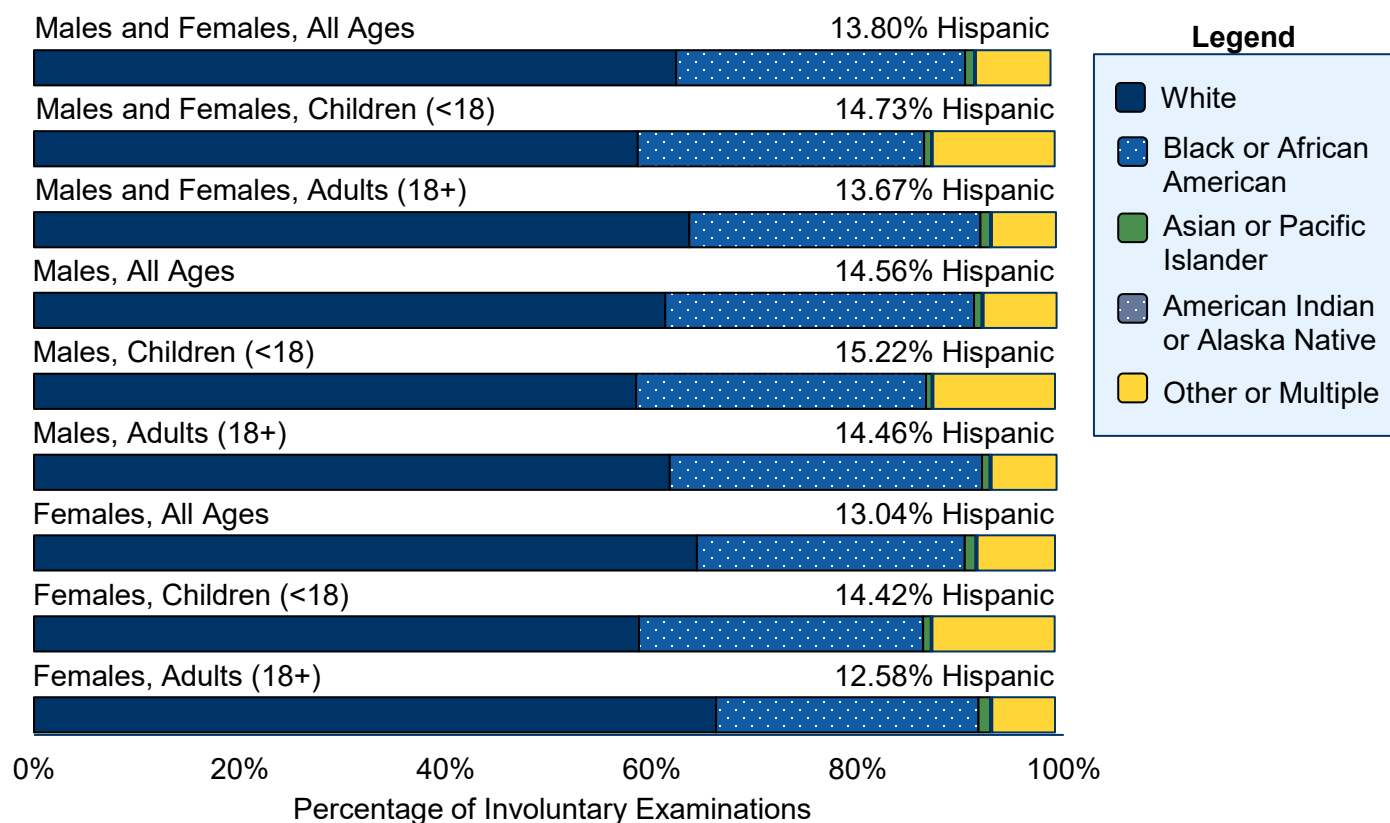

⁴ See [Appendix B](#) for details about a 2022 statutory change related to voluntary admissions of children to Baker Act Receiving Facilities that likely impacted the number of involuntary examinations for children.

Demographics: Of the 161,576 involuntary examinations in FY 2023-2024, 54.39 percent were for males, 45.06 percent for females, and gender was unknown for less than one percent. Race and ethnicity breakdowns by age and gender groups are shown in Table 3 and Figure 1. Some percentages do not sum to 100 percent due to missing data and rounding. Counts of involuntary examinations below 20 were redacted for small cell sizes to eliminate the ability to use total counts or percentages to determine the exact count of redacted cells.

Table 3: Race and Ethnicity Breakdown by Age and Gender Groups

Race or Ethnicity	Females and Males			Males			Females		
	All Ages	Children (<18)	Adults (18+)	All Ages	Children (<18)	Adults (18+)	All Ages	Children (<18)	Adults (18+)
White	62.37%	58.64%	63.62%	61.29%	58.47%	61.74%	64.38%	58.75%	66.24%
Black or African American	28.05%	27.80%	28.29%	30.01%	28.15%	30.32%	26.00%	27.58%	25.48%

American Indian or Alaska Native	0.18%	0.16%	0.19%	0.18%	<1%	0.18%	0.19%	0.17%	0.20%
Other or Multiple	7.24%	11.84%	6.22%	7.08%	11.83%	6.31%	7.52%	11.85%	6.09%
Hispanic Origin									
Hispanic*	13.80%	14.73%	13.67%	14.56%	15.22%	14.46%	13.04%	14.42%	12.58%
*Hispanic ethnicity was collected separately from race. Hispanic individuals can be any race.									

Figure 1: Race and Ethnicity Breakdown by Age and Gender Groups

Initiation Type: Involuntary examinations may be initiated by law enforcement, certain health professionals, or ex-parte court orders (see Table 4 and Figure 2). The types of health professionals that initiated involuntary examinations are shown in Table 5. For all ages, 52.36 percent of the involuntary examinations in FY 2023-2024 were initiated by law enforcement, 44.53 percent were initiated by a health professional, and 3.11 percent were initiated via ex-parte court order. Counts of involuntary examinations below 20 were redacted for small cell sizes, along with additional percentages to eliminate the ability to use total counts or percentages to determine the exact count of redacted cells. These counts were rounded to the nearest percentage by fives.

Table 4: Initiation Type for FY 2023-2024 by Age and Gender Sub-Groups

Initiation Type	All Ages	Children (<18)	Adults (18+)	5-10	11-13	14-17	18-24	25-64	65+
Males and Females									
Law Enforcement	52.36%	64.62%	49.58%	<65%	65.85%	64.10%	54.99%	49.21%	42.76%
Health Professional	44.53%	34.35%	46.82%	<40%	33.72%	34.55%	42.63%	46.95%	53.63%
Ex-Parte Court Order	3.11%	1.03%	3.60%	<1%	0.43%	1.35%	2.38%	3.84%	3.61%
Males									
Law Enforcement	53.06%	69.59%	50.52%	<65%	<75%	69.02%	56.89%	49.89%	44.65%
Health Professional	43.42%	29.01%	45.63%	<40%	<30%	29.05%	39.88%	46.12%	51.89%
Ex-Parte Court Order	3.52%	1.40%	3.84%	<1%	<1%	1.93%	3.24%	3.99%	3.46%
Females									
Law Enforcement	51.50%	61.40%	48.27%	<65%	62.17%	60.90%	52.80%	48.18%	40.82%
Health Professional	45.85%	37.81%	48.47%	<40%	37.40%	38.13%	45.83%	48.20%	55.41%
Ex-Parte Court Order	2.65%	0.79%	3.26%	<1%	0.42%	0.97%	1.38%	3.63%	3.77%

Figure 2: Initiation Type for FY 2023-2024 by Age and Gender Sub-Groups

Professional Certificate Type: Percentages of involuntary examinations initiated by a health professional are shown by professional certificate type in Table 5 and pictured in Figure 3. Children under the age of 18 with involuntary examinations initiated by professional certificates were more likely than other age groups to have involuntary examinations initiated by licensed mental health counselors and licensed clinical social workers and were less likely than other groups to have involuntary examinations initiated by physicians (including psychiatrists).

Table 5: Involuntary Examination Initiations by Professional Certificate Type and Age Groups

Professional Certificate Type	All Ages	Adults (18+)	Children (<18)
Physicians (not a Psychiatrist)	64.19%	67.42%	45.99%
Mental Health Counselors	13.46%	11.59%	24.05%
Physicians (Psychiatrists)	7.72%	8.01%	6.12%
Clinical Social Workers	6.75%	5.08%	16.15%
Psychiatric Nurses	3.57%	3.83%	2.04%
Physician Assistants	2.93%	2.88%	3.27%
Marriage and Family Therapists	0.69%	0.58%	1.29%
Clinical Psychologists	0.68%	0.60%	1.09%

Percentages were calculated by dividing the number of involuntary examinations initiated by certain professional certificate types by the total number of involuntary examinations initiated by any health professional.

Figure 3: Involuntary Examinations Initiated by Certain Health Professional Types by Age Groups

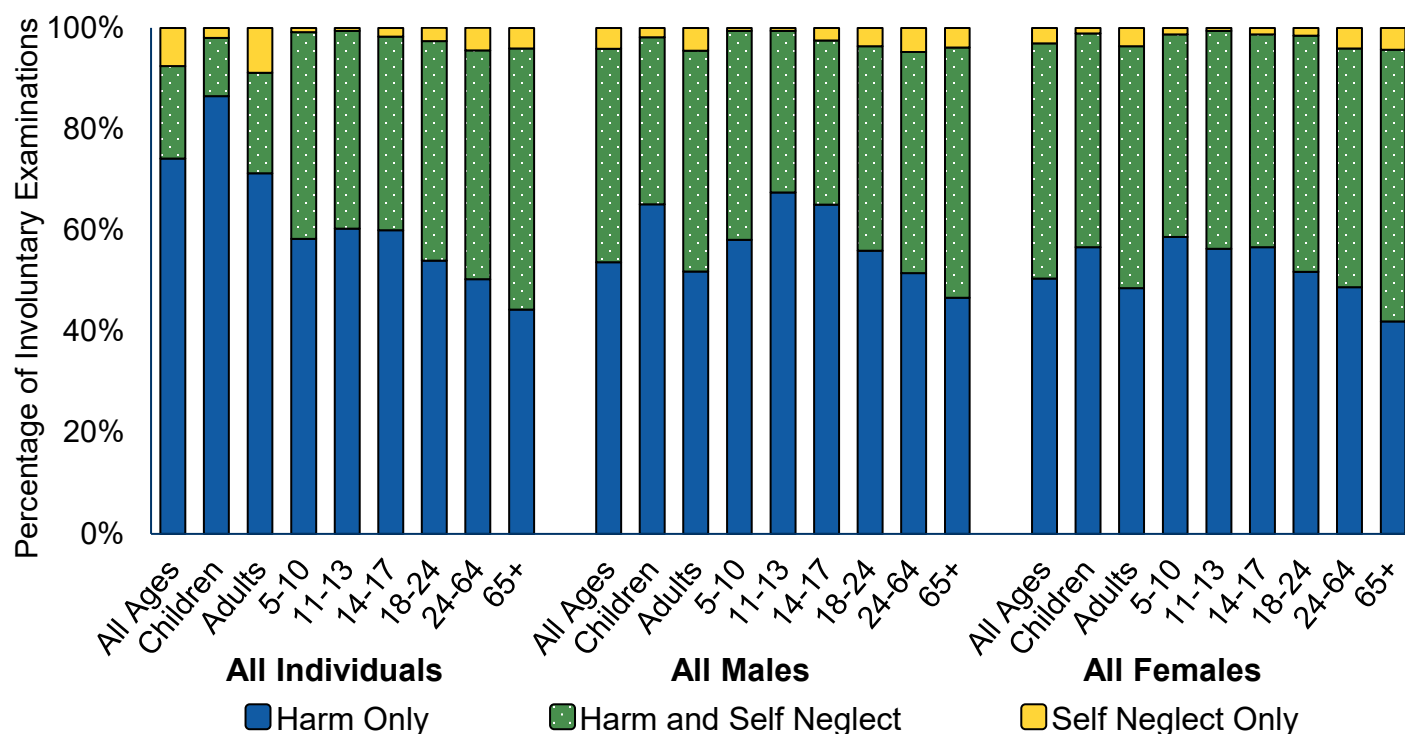

Evidence Type: To initiate an involuntary examination, there must be evidence of harm, neglect, or both harm and neglect (see Table 6 and Figure 4 below). For all ages, almost three-quarters (74.16 percent) of involuntary examinations were based on evidence of *harm only*, which includes both *self-harm* and *harm to others*. There were 18.26 percent of involuntary examinations based on *both harm* and *self-neglect*. There were 7.58 percent of involuntary examinations based on evidence of *self-neglect only*. Adults were more likely than children to have an involuntary examination based on *self-neglect only*. Counts of involuntary examinations below 20 were redacted for small cell sizes along with additional percentages to eliminate the ability to use total counts or percentages to determine the exact count of redacted cells. These counts were rounded to the nearest percentage by fives.

Table 6: Evidence Type for FY 2023-2024 by Gender and Age Sub-Groups

Evidence Type	All Ages	Children (<18)	Adults (18+)	5-10	11-13	14-17	18-24	25-64	65+
Males and Females									
Harm Only	74.16%	86.50%	71.24%	<60%	60.34%	59.99%	53.98%	50.36%	44.30%
Harm and Self-Neglect	18.26%	11.54%	19.86%	<45%	39.08%	38.26%	43.39%	45.19%	51.61%
Self-Neglect Only	7.58%	1.96%	8.90%	<1%	0.58%	1.75%	2.64%	4.46%	4.08%
Males									
Harm Only	53.66%	65.13%	51.85%	<60%	67.48%	65.06%	55.97%	51.55%	46.64%
Harm and Self-Neglect	42.21%	33.04%	43.64%	<45%	31.93%	32.47%	40.42%	43.70%	49.49%
Self-Neglect Only	4.13%	1.83%	4.51%	<1%	0.59%	2.47%	3.60%	4.75%	3.86%
Females									
Harm Only	50.45%	56.64%	48.59%	<60%	56.36%	56.66%	51.76%	48.73%	41.96%
Harm and Self-Neglect	46.51%	42.29%	47.77%	<45%	43.06%	42.06%	46.67%	47.21%	53.73%
Self-Neglect Only	3.04%	1.07%	3.64%	<1%	0.58%	1.28%	1.57%	4.06%	4.31%

Figure 4: Evidence Type for FY 2023-2024 by Gender and Age Sub-Groups

Harm Type: Harm can be further broken down into *harm to self* and/or *harm to others*. The percentage of involuntary examinations that had harm as an evidence type (either harm only or both harm and neglect) by harm type is shown in Table 7 and Figure 5. Almost two-thirds (64.43 percent) of all involuntary examinations were based on evidence of *harm to self only*. There were 17.16 percent of all involuntary examinations based on both *harm to self* and *harm to others*. *Harm to others only* was used as evidence for 6.51 percent of all involuntary examinations. Harm type was irrelevant for 11.90 percent of all involuntary examinations because the evidence type was self-neglect only. In Table 7, counts of involuntary examinations below 20 were redacted for small cell sizes along with additional percentages to eliminate the ability to use total counts or percentages to determine the exact count of redacted cells. These counts were rounded to the nearest percentage by fives.

Table 7: Harm Type for Involuntary Examinations with Harm as an Evidence Type by Gender and Age

Harm Type	All Ages	Children (<18)	Adults (18+)	5-10	11-13	14-17	18-24	25-64	65+
Males and Females									
Harm to Self Only	64.43%	68.73%	63.59%	52.33%	67.67%	70.61%	66.84%	63.48%	58.40%
Harm to Self and Others	17.16%	18.19%	16.80%	29.93%	17.93%	17.31%	16.43%	17.00%	15.58%

Figure 5: Harm Type for Involuntary Examinations with Harm as an Evidence Type by Gender and Age

Repeated Involuntary Examinations for One Year and Three Years

Information about repeated involuntary examinations for one year (FY 2023-2024) and three years (FY 2021-2022 through FY 2023-2024) is shown in Tables 8a and 8b, as well as Figures 6 and 7. Approximately one quarter of adults experienced two or more involuntary examinations during the one-year and three years. During the one-year period, one-quarter of children experienced two or more involuntary examinations. During the three years, 29 percent of children experienced two or more involuntary examinations.⁵

Table 8a: Repeated Involuntary Examinations for **Adults by One-year and Three-years**

Number of Involuntary Examinations	Count of Adults	Percent of Adults	Count of Examinations	Percent of Examinations
1 Year: FY 2023-2024				
1	66,459	76.21%	66,459	50.90%
2	11,767	13.49%	23,534	18.02%
3	4,041	4.63%	12,123	9.28%
4	1,953	2.24%	7,812	5.98%
5	946	1.08%	4,730	3.62%
6-10	1,476	1.69%	10,655	8.16%
11-19	317	0.36%	4,165	3.19%
20+	40	0.05%	1,038	0.79%
Total	87,208 Adults		130,574 Involuntary Examinations	
3 Years: FY 2021-2022 through FY 2023-2024				
1	159,329	71.15%	159,329	39.08%
2	32,444	14.49%	64,888	15.92%
3	12,366	5.52%	37,098	9.10%
4	6,352	2.84%	25,408	6.23%
5	3,833	1.71%	19,165	4.70%
6-10	6,631	2.96%	48,806	11.97%
11-19	2,236	1.00%	30,557	7.50%
20+	746	0.33%	22,441	5.50%
Total	223,937 Adults		407,692 Involuntary Examinations	
Counts of individuals with 20 or more involuntary examinations during the year are grouped together to redact for cell sizes lower than 10.				

⁵ There were 607 individuals who were in more than one age category for FY 2023-2024. This means that the one-year count of individuals summed from Table 8a and Table 8b equals 108,167, while the total count of individuals with involuntary examinations in FY 2023-2024 equals 107,560.

Table 8b: Repeated Involuntary Examinations for **Children** by One-year and Three-years

Number of Involuntary Examinations	Count of Children	Percent of Children	Count of Examinations	Percent of Examinations
1 Year: FY 2023-2024				
1	14,791	75.25%	14,791	49.95%
2	2,572	13.09%	5,144	17.37%
3	894	4.55%	2,682	9.06%
4	408	2.08%	1,632	5.51%
5	250	1.27%	1,250	4.22%
6-10	379	1.93%	2,786	9.41%
11+	86	0.44%	1,327	4.48%
Total	19,655 Children		29,612 involuntary examinations	
3 Years: FY 2021-2022 through FY 2023-2024				
1	39,478	70.70%	39,478	41.30%
2	8,569	15.35%	17,138	17.93%
3	3,044	5.45%	9,132	9.55%
4	1,583	2.83%	6,332	6.62%
5	928	1.66%	4,640	4.85%
6-10	1,629	2.92%	11,921	12.47%
11-19	500	0.90%	6,802	7.12%
20+	109	0.20%	3,155	3.30%
Total	55,840 Children		95,598 involuntary examinations	
Groupings of the maximum number of involuntary examinations reported for children (11+) and adults (20+) were used to redact for small cell sizes.				

Figure 6: Repeated Involuntary Examinations for Children and Adults by One-year and Three-years

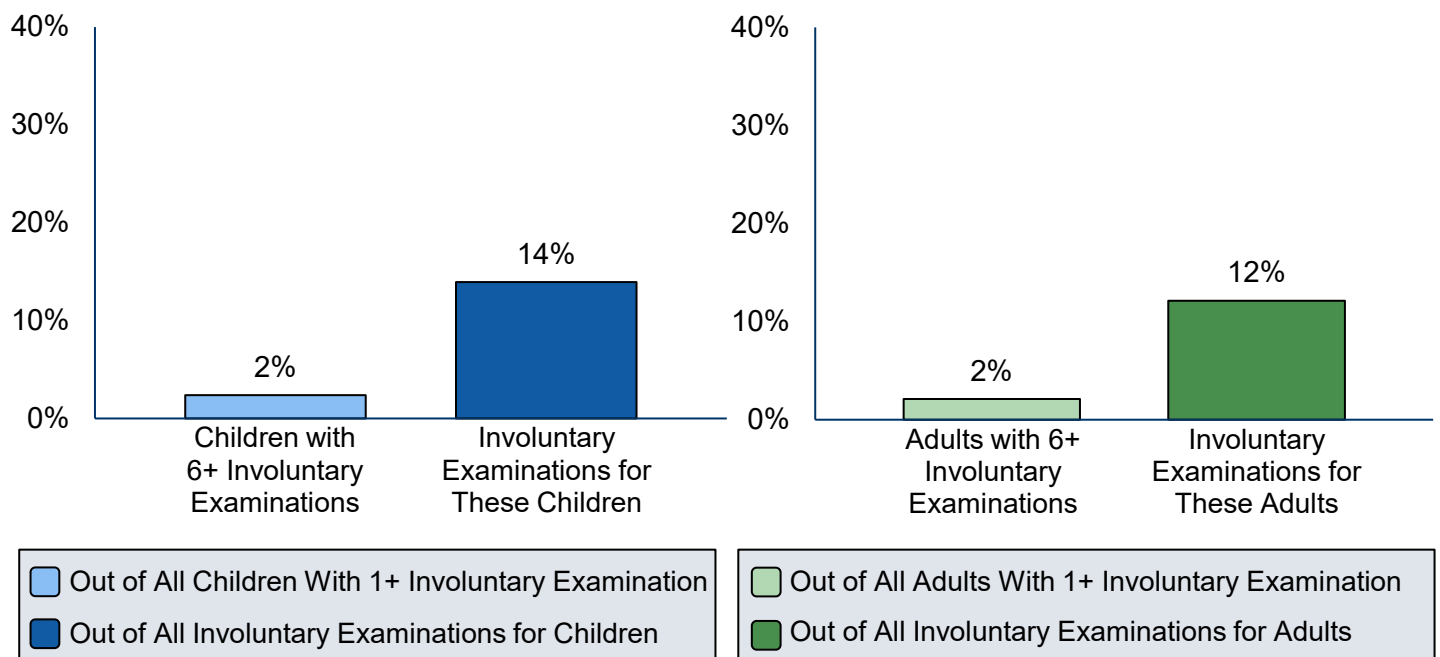

Figure 7 shows how the small percentage of children and adults with six or more involuntary examinations in FY 2023-2024 accounted for a disproportionately large percentage of involuntary examinations. For example, the two percent of children with six or more involuntary examinations during the year accounted for 14 percent of all involuntary examinations for children. The two percent of adults with six or more involuntary examinations during the year accounted for 12 percent of all involuntary examinations for adults.

Figure 7: Repeated Involuntary Examinations by Children and Adults in FY 2023-2024

IV. Involuntary Inpatient Placements and Involuntary Outpatient Services

This section summarizes data entered from documents submitted by Clerks of Court statewide to the Baker Act Reporting Center. This includes petitions and orders for involuntary inpatient placement, and petitions, orders, and treatment plans for involuntary outpatient services.⁶ Baker Act Reporting Center staff establish a timeframe for the submission of documents from Clerks of Courts. There is no statutorily required timeframe within which Clerks of Courts are required to submit these documents. Timeframes vary, such as monthly for counties with fewer of these types of cases and more frequently for counties with a higher volume of cases. Note the timing of this report limits the data available for FY 2023-2024. Therefore, this section of the report focuses on FY 2022-2023.

Florida Courts Data on Hearings: Information on the Office of State Court Administrators (OSCA) Florida Courts website about Court Statistics helps provide context to the information reported by the Baker Act Reporting Center about involuntary inpatient placement and involuntary outpatient services. The Statistics page of this OSCA website provides access to Trial Court Statistics. A summary generated from the Florida courts website of trial court statistics for probate cases in FY 2022-2023 is shown in Table 9. It is important to understand that these OSCA data are compiled and reported for purposes of court administration. OSCA data are being used to understand the number of different case types to compare to data entered at the Baker Act Reporting Center from Clerks of Courts documents in this report. There are many nuances as to why these numbers may differ slightly. Also, these OSCA data can be used to count hearings, but they do not indicate the outcome of the hearing. In the context of “Baker Act” cases, these OSCA data do not tell us about the counts of cases for which people were and were not ordered to involuntary inpatient placement, for example.

Table 9: OSCA Trial Court Statistics Summary Report System for Probate Cases – FY 2022-2023
Summary Reporting System (SRS)

Summary for the month of July 2022 through June 2023

State Total

Probate

	Probate	Guardianship	Trust	Baker Act	Substance Abuse	Other Social	Total
A. Cased Filed	72,765	9,398	714	51,317	10,236	6,364	150,794
B. Cases Disposed							
1. Dismissed Before Hearing	34,064	1,157	169	27,262	4,780	997	68,429
4. Disposed By Judge	36,736	6,445	440	20,905	5,319	4,716	74,561
5. Disposed By Non-Jury Trial	85	879	5	1,052	78	330	2,429
7. Other	1,050	192	28	2,428	19	35	3,752
Total Disposed	71,935	8,673	642	51,647	10,196	6,078	149,171
C. Cases Reopened	19,555	87,778	170	1,785	2,130	2,502	113,920

SRS data are used to measure trial court activity in Florida. These data are not intended as a measure of efficiency of the judiciary, state attorneys, or public defenders.

These data are based on information received from the Clerks of Court and are extracted from a static data base containing the official trial court statistics.

10/30/2024 7:22:22 AM

⁶ Note that “involuntary services” was referred to in the Baker Act as “involuntary outpatient placement” in the past. Nationally some individuals refer to this legal mechanism as “involuntary outpatient commitment,” “assisted outpatient treatment” or AOT.

The data in Table 9 show that statewide for FY 2022-2023, about half (53 percent), of “Baker Act” cases were dismissed before the hearing. Note that the “Baker Act” column in Table 9 includes case counts for involuntary inpatient placement and involuntary outpatient services, as well as ex-parte orders for involuntary examinations. The data on ex-parte court-ordered involuntary examinations are entered by Baker Act receiving facilities into the Baker Act Data Collection System. This means that an estimate of the number of involuntary inpatient placement and involuntary outpatient services cases can be computed by subtracting the number of ex-parte court orders for involuntary examination from the count of Baker Act cases as reported in the OSCA data. This is an overestimate because involuntary examination petitions that do not result in a person being ordered to an involuntary examination by ex-parte court order are not in the involuntary examination data to subtract from the total number of Baker Act cases but are part of the “Baker Act” case counts in the OSCA data.

Also of note, it is logical to think that the number of cases filed should equal the number of cases disposed. However, Table 9 shows that 330 more Baker Act cases were disposed of than filed. This is due to the timing of how cases are recorded in these OSCA data. For example, a case filed in late June 2023 would have been counted as a “case filed” for FY 2022-2023, but if disposed of in July 2023 would have been counted in the trial court statistics for FY 2023-2024. Given these timing issues, the count of cases filed compared to cases disposed of is remarkably close.

Note that Chapter 394, F.S., specifies that the Department receives orders for involuntary inpatient placement and involuntary outpatient services⁷ but does not specify a requirement for petitions. The statute specifies that Clerks of Courts submit petitions for involuntary inpatient services⁸ and involuntary outpatient services⁹ but does not specify a requirement for the submission of orders to the Department. In FY 2022-2023, the OSCA data shows that 51,317 Baker Act cases were filed. Subtracting the 4,370 cases of involuntary examinations via ex-parte court orders results in an estimated 46,604 cases of involuntary inpatient placement and involuntary outpatient services combined (see Table 10).

Revised language as of 2024 in Chapter 394, F.S., and Chapter 397, F.S., (the Marchman Act) has similar issues about document submission to the language in place before 2024. The document submission process can be improved with changes to the statute and rule that add specificity to who submits what to whom, in what timeframe. A requirement for Clerks of Courts to submit orders and petitions or authorize the Baker Act Reporting Center to access documents from a certain data system, such as the Comprehensive Case Information System (CCIS), will enrich the data (see page 16 for information about the Baker Act Reporting Center’s CCIS Pilot project).

⁷ The Department’s Receipt of Orders 2023: The department shall receive and maintain the copies of ex parte orders, involuntary outpatient services orders issued pursuant to s. 394.4655, involuntary inpatient placement orders issued pursuant to s. 394.467, professional certificates, law enforcement officers’ reports, and reports relating to the transportation of patients. 394.463(2)(d)4(e) (2023).

⁸ Submission of documents for involuntary inpatient placement 2023: Upon filing, the clerk of the court shall provide copies to the department, the patient, the patient’s guardian or representative, and the state attorney and public defender of the judicial circuit in which the patient is located. A fee may not be charged for the filing of a petition under this subsection. 394.467 (3) (2023)

⁹ Submission of documents for involuntary outpatient services 2023:

When the petition has been filed, the clerk of the court shall provide copies of the petition and the proposed treatment plan to the department, the managing entity, the patient, the patient’s guardian or representative, the state attorney, and the public defender or the patient’s private counsel. 394.4655(4) (2)(c), F.S., and When the petition has been filed, the clerk of the court shall provide copies of the certificate and the individualized plan of continued services to the department, the patient, the patient’s guardian advocate, the state attorney, and the patient’s private counsel or the public defender. 394.4655(8)(a)4, F.S. (2023)

Table 10: Involuntary Inpatient Placement and Involuntary Outpatient Services Documents Received by the Baker Act Reporting Center – FY 2022-2023

County	Involuntary Inpatient Placement		Involuntary Outpatient Services		
	Petition	Order	Petition	Order	Treatment Plan
Hillsborough	6,463	128			
Broward	3,882	46			
Miami-Dade	3,621	84			
Pinellas	3,101	123	14	13	21
Lee	2,689	<10	28	11	<10
Polk	2,428	28			
Duval	2,032	35			
Alachua	1,831		<10		
Palm Beach	1,720	304	<10	<10	
Sarasota	1,666	12			
Orange	1,242	350			
Hernando	1,197	194			
Volusia	1,160	98			
Collier	1,145	105	<10	<10	<10
Pasco	1,038	23			
Escambia	919	42			
Leon	711	53		<10	
Brevard	616	206			
Charlotte	578	13			
Marion	495	180			
Manatee	478	<10			
Okaloosa	431	94	<10		
Seminole	413	106	<10		
Columbia	389	54			
Saint Lucie	348	122			
Martin	239				
Osceola	198	17			
Bay	187	<10			
Lake	151	105	18	19	
Clay	127				
Indian River	101	16			
Saint Johns	89	82			
Monroe	84	11			
Total	41,769	2,631	60	43	21

The total number of cases of involuntary inpatient placement and involuntary services filed based on Baker Act Reporting Center data entry from documents submitted by Clerks of Courts (41,769) is remarkably close to the estimated number of cases based on OSCA data (46,604). Keeping in mind that petitions for ex-parte orders that did not result in an involuntary examination were not subtracted from the total count of Baker Act Cases in the OSCA data means that the difference between the estimated cases is even less.

V. Comprehensive Case Information System Pilot

The Baker Act Reporting Center started a pilot in December 2023 to determine the feasibility of locating Clerks of Courts documents in the Comprehensive Case Information System (CCIS) and entering data from them. Not all counties allowed the Baker Act Reporting Center to access to documents in CCIS. About half, 33 out of 67, of counties have at least one Baker Act receiving facility. The Baker Act Reporting Center only receives documents from Clerks of Courts in counties with a Baker Act receiving facility. This is because, with one caveat, the Baker Act receiving facilities file petitions for involuntary inpatient placement and involuntary outpatient services. The caveat is that state treatment facilities may file petitions for involuntary outpatient services, but they must be filed with the Clerk of Courts in the county to which the person is going to be released. This means it is possible for a petition for involuntary outpatient services to be filed in a county without a receiving facility. However, this does not occur based on information provided to the Baker Act Reporting Center by Department staff.

- **Counties with Baker Act Receiving Facilities**
 - Yes – Able to Access Documents in CCIS (n = 16): Alachua, Brevard, Broward, Charlotte, Clay, Columbia, Indian River, Leon, Lake, Lee, Marion, Martin, Monroe, Pasco, St. Johns, and Volusia
 - No – Unable to Access Documents in CCIS (n = 17): Bay, Collier, Duval, Escambia, Manatee, Orange, Hernando, Miami-Dade, Okaloosa, Hillsborough, Osceola, Palm Beach, Pinellas, Polk, Sarasota, Seminole, and St. Lucie
- Counties with No Baker Act Receiving Facilities (n = 34): Baker, Bradford, Calhoun, Citrus, DeSoto, Dixie, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Highlands, Holmes, Jackson, Jefferson, Lafayette, Levy, Liberty, Madison, Nassau, Okeechobee, Putnam, Santa Rosa, Sumter, Suwannee, Taylor, Union, Wakulla, Walton, and Washington.

Baker Act Reporting Center staff were able to locate documents in CCIS for 16 counties and enter data from them. This was done by looking up cases classified as “mental health” for each county for each month. Cases included in the “mental health” category include those for involuntary inpatient placement, involuntary outpatient services, substance abuse-related (Marchman Act) involuntary assessment and treatment, petitions to determine incapacity, risk protection orders, and involuntary examinations via ex-parte court orders. The following was learned from this pilot:

- It is feasible within the current scope of work of the Baker Act Reporting Center to access documents in CCIS for all counties and enter data from them instead of having Clerks of Courts securely upload documents to the Baker Act Reporting Center for data entry.
- Clerks of Courts could be offered the option to continue to securely transfer documents to the Baker Act Reporting Center or opt instead for Baker Act Reporting Center staff to access documents in CCIS and enter data from them. This may require changes to statute and rule.
- There are also added benefits of accessing documents in CCIS as follows:
 - Additional information about ex-parte court orders for involuntary examination can be collected as part of this process. (See details on the next page of this report.)
 - Data can also be entered by Baker Act Reporting Center staff for Marchman Act cases identified in CCIS. This is relevant to the Marchman Act report that is now required annually due to a statutory change that took effect in July 2024.¹⁰ Court orders constitute one of five pathways for involuntary assessment and treatment as the Marchman Act allows.

¹⁰ See House Bill 7021 (2024).

Service of Orders for Involuntary Examination by Ex-Parte Court Orders

As part of the CCIS pilot, Baker Act Reporting Center staff were able to document the dismissal, denial, and service of ex-parte orders for involuntary examinations. Note that this summary does not represent the entire state because Baker Act Reporting Center staff only had access to documents in CCIS for 16 of the 33 counties with Baker Act receiving facilities. However, this information for select counties highlights details about the service of ex-parte orders for involuntary examinations generally and to inform future efforts. The information in the Clerks of Court system accessed using CCIS varies in how information about the service of ex-parte orders for involuntary examination is reported.

According to s.394.463(2)(a), F.S., the length of time of ex-parte orders for involuntary examination are valid is as follows: *The order shall be valid only until the person is delivered to the facility or for the period specified in the order itself, whichever comes first. If a time limit is not specified in the order, the order is valid for 7 days after the date that the order was signed.* Details about denials and dismissal of petitions for ex-parte court orders for involuntary examination and service of orders are summarized in Table 11.

Table 11: Orders and Service for Ex-Parte Court Orders in 16 Counties - FY 2022-2023

Details About Orders and Service	Ex-Parte Cases for Involuntary Examination	
	Cases	Percentage of Cases
Not Ordered or Ambiguous Order Status*		
Denied	1,305	20.19%
Dismissed	464	7.18%
Unclear if Ordered & Served	615	9.52%
Ordered**		
Unserved or Unexecuted	447	10.96%
Served	3,336	81.80%
Ordered, Service Unindicated	295	7.23%
*Percentages out of 6,462 total cases **Percentages out of 4,078 cases ordered		

Clerks of Courts documentation in CCIS varied in how the ordering of involuntary examination and service of ex-parte court orders for involuntary examination were documented. For example, almost 10 percent of cases had an ambiguous status in CCIS about the order and if the order was served. Some Clerks of Courts indicated that an order was “served” or “unserved” while others referred to orders being “executed” or “unexecuted.” For this analysis, the Department considered the use of both served and executed to mean that the order was served and unserved or unexecuted to mean it was not served.

One in five petitions for court-ordered involuntary examination were denied. When combined with the percentage of petitions that were dismissed, this means that approximately one quarter of petitions for involuntary examination did not result in an order.

The majority (81.80 percent) of petitions that were ordered were served. About 10 percent of orders had an indication in CCIS that they were not served or not executed. There were 7.23 percent of cases that documented an order being granted but for which Baker Act Reporting Center staff could not find information in CCIS about the service of the order.

VI. Enhancing the System of Care to Reduce Behavioral Health Crisis

The Department uses data from Baker Act annual reports to drive policy changes and the development of services and resources that support individuals who engage with behavioral health services prior to a Baker Act and post-discharge. Community resources include peer support services, outpatient therapies, residential services, crisis services, and training to ensure individuals receive the appropriate level of care. The Department continues to focus on enhancing the continuum of behavioral health services that are available throughout Florida and providing more prevention programming that identifies and addresses problems earlier. The Department believes that increased capacity and access to the services identified below account for, in part, the reduction in the number of involuntary examinations. The Department intends to conduct further analysis.

Service Array

The Department prioritizes the needs of uninsured and under-insured individuals with behavioral health concerns and integrates prevention services to provide individuals with someone to speak with (helplines), someone to respond (mobile response teams), and someplace to go (receiving facilities). Any of these avenues can be the door to other behavioral health services and supports, such as routine individual, group, and family therapy, and more intensive services like multidisciplinary treatment teams such as Florida Assertive Community Treatment (FACT) and Community Action Treatment (CAT). There are also residential treatment options for individuals who require more extensive care at a higher acuity level, such as state mental health treatment facilities, short-term residential treatment centers, specialized therapeutic group homes, and statewide inpatient psychiatric programs – the latter two are only available for children.

Helplines

A variety of helplines operate in Florida, providing someone to speak with as a first-line effort when an individual needs assistance. These include the Hope Line, 850-300-HOPE (part of the Department initiative called Hope Florida) and 9-8-8 (providing emotional support and crisis counseling). In FY 2023-2024, the 988 Florida Lifeline answered 120,318 calls and 96 percent of these calls were resolved without the need for higher-level intervention (i.e., someone to respond and/or somewhere to go).

Mobile Response Teams

Mobile response teams are available 24 hours a day and 7 days a week to provide the community with access to clinical and peer professionals who can respond to schools, homes, or community settings. Teams respond to calls to assist in de-escalating situations, identifying coping strategies, and developing safety plans to avoid unnecessary hospital or emergency room visits.

In FY 2023-2024, Florida mobile response teams reported about 80 percent of engagements resulted in community stabilization rather than an involuntary examination or Baker Act. After the immediate crisis is resolved, the mobile response team stays in contact until the individual is connected to other services and supports. This could include routine outpatient services, care coordination, or other recovery support services. In FY 2023-2024, the Department expanded mobile response teams to serve all ages and increased the number of teams to 51. An additional expansion will occur during FY 2024-2025.

Outpatient Therapy

Individuals with behavioral health issues can enter outpatient therapy to receive clinical services to learn to manage symptoms of depression, anxiety, any mental health condition, or past trauma before a crisis arises.

Care Coordination

Care Coordination serves to assist individuals, both children and adults, who are not effectively connected with the services and supports they need to transition successfully from higher levels of care to effective community-based care. This includes services and supports that affect an individual's overall well-being, such as primary physical health care, housing, and social connectedness. Care Coordination connects systems, including behavioral health, primary care, peer and natural supports, housing, education, vocation, and the justice systems. It is time-limited, with a heavy concentration on educating and empowering the individuals served and provides a single point of contact until an individual is adequately connected to the care that meets their needs. In FY 2023-2024, 5,281 individuals were served through Care Coordination, including locating housing for 981 individuals who were unstably housed or homeless.

Florida Assertive Community Treatment

Florida Assertive Community Treatment (FACT) teams serve adults with serious mental illness with the goal of preventing recurrent hospitalization and incarceration, as well as improving community involvement and quality of life for participants. FACT teams are an evidence-based practice model for preventing the need for more intensive services and serve as a step-down from inpatient settings. FACT teams utilize a transdisciplinary approach to deliver comprehensive care and promote independent, integrated living. FACT teams operate continuously 24 hours a day, 7 days a week, 365 days a year via worked shifts as well as on-call during non-business hours. FACT teams primarily provide services to participants where they live, work, or other preferred settings. In FY 2023-2024, the Department expanded FACT teams to a total of 39 teams, which served 3,922 individuals.

Community Action Treatment

Utilizing an in-home team approach, the Community Action Treatment (CAT) model activates a team of skilled transdisciplinary professionals to address the needs of young individuals (and their families) with a mental health or substance use issue and other complex needs to improve functioning and management of their illness. The goal of CAT is to assist young individuals in successfully remaining with their families and staying connected to their community. In FY 2023-2024, the Department expanded CAT teams to a total of 69 teams, serving 3,444 youth and their families. This includes three new CAT models to serve younger children using the traditional CAT model that has been adapted for

youth under 10 years of age; a family crisis care coordination model to serve families where the frequent use of emergency psychiatric services, particularly crisis stabilization units, contributes to family disruption or risk of separation; and teams using evidence-based practices through an in-home family treatment approach to meet the needs of the entire family.

First Episode Psychosis

First Episode Psychosis care is a team-based model for adolescents and young adults, ages 15 to 35, experiencing symptoms of early serious mental illness. This evidence-based approach builds connections to services that are important to helping the young individual and their family navigate this difficult experience and teach them to manage their symptoms. This can help reduce future crisis episodes, prevent disability, and promote full recovery. In FY 2023-2024, there were 15 teams statewide covering twenty counties. The teams showed an 79 percent success rate of improved functioning for individuals experiencing the first symptoms of a psychotic disorder.

Short-term Residential Treatment

Short-term Residential Treatment (SRT) provides a high level of care for individuals experiencing a mental health crisis and need a longer stay alternative to hospitalization. This is one option that health care professionals pursue when they determine an individual continues to need 24-hour psychiatric services for a longer term stay than what a Baker Act Facility offers. The average length of stay is approximately 90 days. SRT benefits individuals who are transferred from a Baker Act receiving facility and helps ensure there is capacity to serve those who are in acute crisis and in need of services. Additionally, SRTs can:

- Serve as a less restrictive alternative to a state mental health treatment facility;
- Allow the treatment team time to complete discharge planning by arranging continued treatment in the community and addressing treatment barriers; and
- Prevent rapid readmission to the Baker Act receiving facility.

In March 2023, the Department revised 65E-14.021, F.A.C., which limited SRT to adults. In September 2023, Citrus Health Network in Miami-Dade County was licensed as the first children's SRT in Florida.

Certified Recovery Peer Specialists

Certified Recovery Peer Specialists (CRPS) assist individuals in successfully transitioning back into the community following discharge from an SMHTF, CSU, or detoxification facility. The CRPS has lived experience in recovery from substance use disorders and/or mental health diagnoses and share their life stories with persons served as they support the individual. The CRPS engages the individual while still inpatient and provides support and information on discharge options. They participate in discharge planning and assist the person in identifying community-based service and support needs and build self-directed recovery tools, such as a Wellness Recovery Action Plan (WRAP), which is an evidence-based practice. The CRPS then supports the individual as they transition to the community.

Statewide Inpatient Psychiatric Program

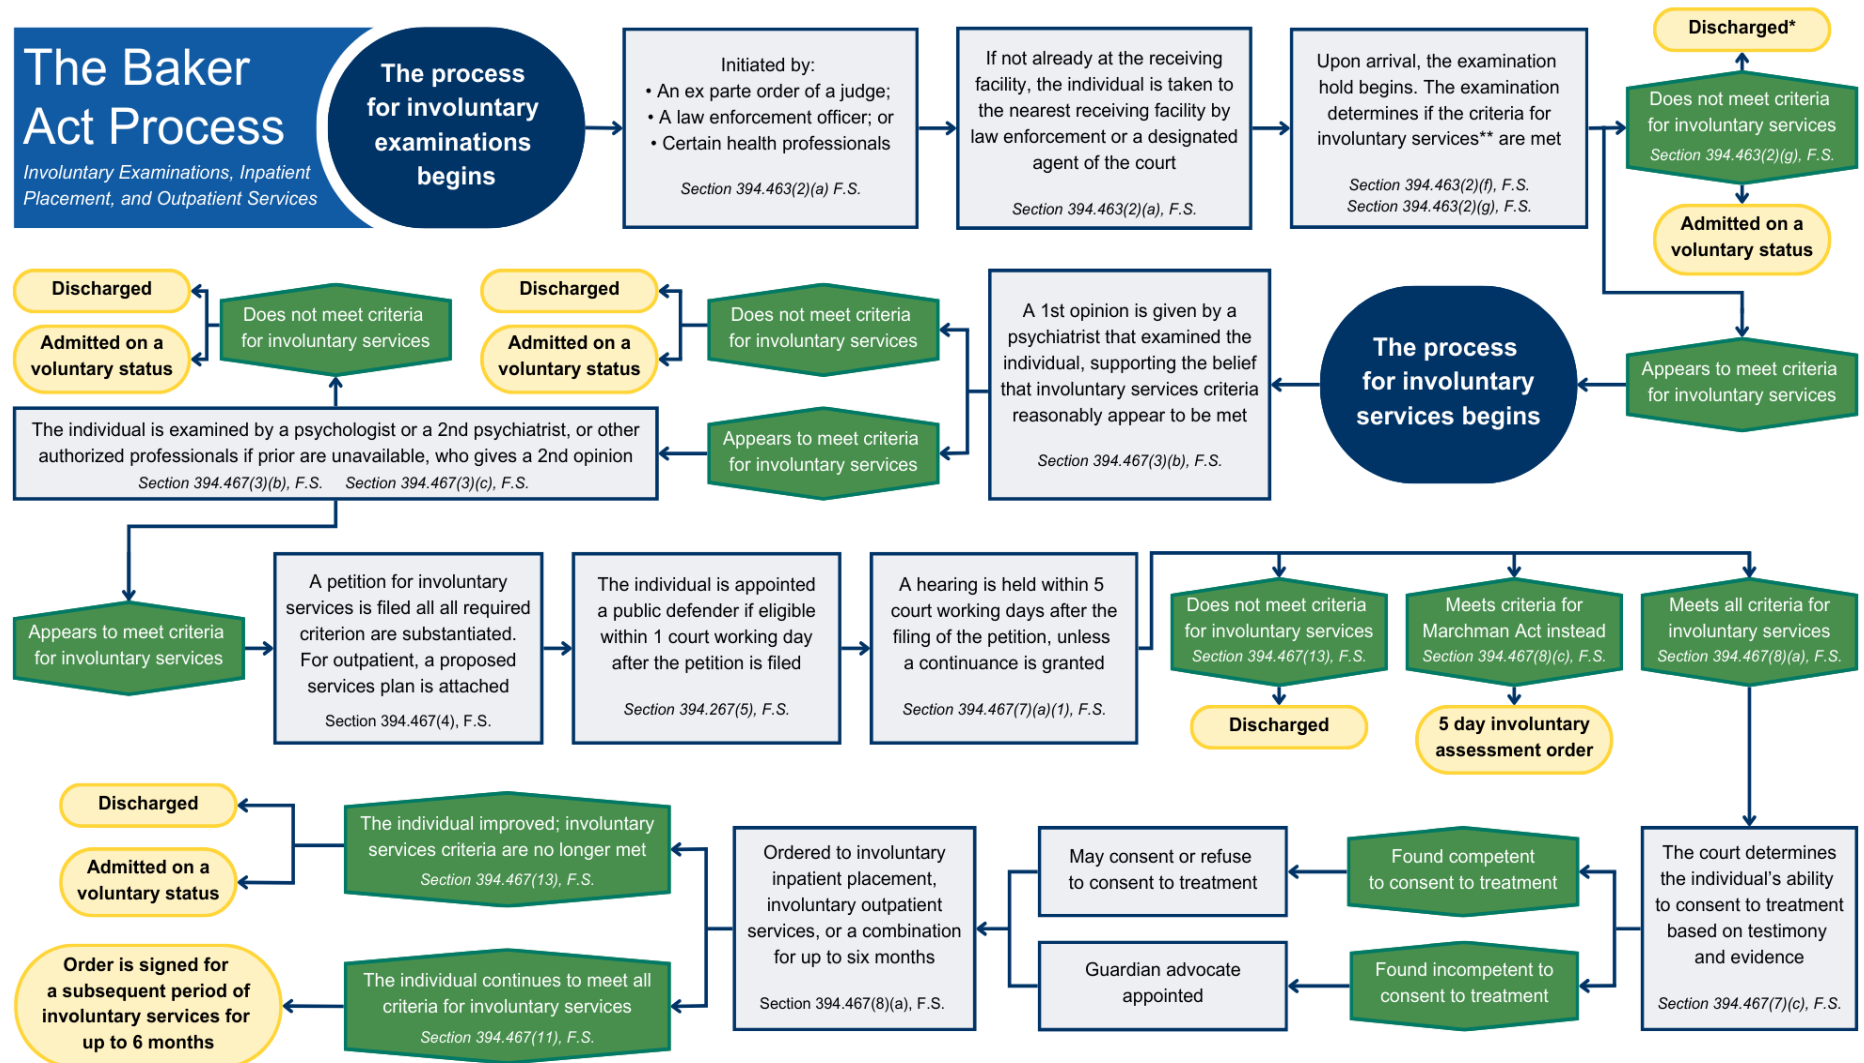

Statewide Inpatient Psychiatric Program (SIPP) is a secure residential treatment program for children and adolescents up to age 21 who exhibit the most severe symptoms of mental and emotional distress. This setting offers intensive treatment in a multidisciplinary approach to stabilize and improve the youth's ability to take significant steps toward recovery. This is the highest and most restrictive level of care, and it must be recommended by a psychiatrist or psychologist. SIPP's primary goal is to stabilize youth so that they can safely return to the care of their parents and/or guardians in the community with improved coping skills to prevent rapid readmission.

State Mental Health Treatment Facilities

State Mental Health Treatment Facilities provide treatment in a secure setting for adults who are diagnosed with a serious mental illness that cannot be treated safely in a less restrictive environment. Individuals remain in care either by court order or voluntarily until they no longer meet the criteria.

VII. Appendices

Appendix A: Flow Chart of the Baker Act Process

*Discharged to the community, police custody if pending charges, or voluntary services.

**Involuntary services refers to involuntary inpatient placement and involuntary outpatient services.

At any point during the involuntary services process, the individual may be discharged or transferred to voluntary services once one or more criteria are no longer met. Section 394.467(13), F.S.

End

Appendix B: Technical Notes

The Baker Act data analyzed for this report are from involuntary examination forms received by the Department. Some individuals for whom forms were received were never admitted to the receiving facility because an examination by a physician or psychologist performed prior to admission determined they did not meet admission criteria. The data also does not include information on what occurred after the initial examination. Because not everyone who has an involuntary examination initiated is admitted to a Baker Act receiving facility, the data in this report are of *involuntary examinations*, not admissions data, and not counts of *voluntary* examinations.

Redaction: **Small cell sizes were redacted to prevent the identification of individuals.** Redaction is done for counts under 10 in some circumstances, and under 20 in other circumstance, such as where the counts were for a more specifically defined population. Those interested in more information about the Baker Act Reporting Center's approach to redaction may contact Center Director, Annette Christy, at achristy@usf.edu.

Counts of Involuntary Examinations vs. Counts of Individuals: This report includes both counts of involuntary examinations and counts of individuals who received involuntary examinations. Those who write about the findings of this report are cautioned to be careful to not confuse counts of involuntary examinations with counts of individuals who received involuntary examinations.

Percent Change: Percent change is included in this report. This is a helpful metric that can put counts of involuntary examinations into context. However, certain issues with using percent change need to be considered. Percent change needs to be interpreted carefully when the change is between *small numbers*. For example, an increase in County A from four to eight is a 100% increase, just as a change in County B from 1,000 to 2,000 is a 100 percent increase. *The challenge is to interpret what importance should be given to this percent change when determining whether there is a problem to be addressed and how to address it.* What these counts represent out of the total population needs to also be considered. For example, County A has a population of 50,000. Four equals a rate of eight per 100,000, while eight equals a rate of 16 per 100,000 for County A. County B has a population of 500,000. This means that 1,000 equals a rate of 200 per 100,000 and 2,000 equals a rate of 400 per 100,000. The rate in County B is much higher than the rate in County A even though the percent increase is the same. Some counties may have large percentages of change, but because their counts were low in relation to other counties to begin with, the increase over time may still mean that their rate per 100,000 is smaller relative to other counties. This [Stats Indiana site](#) suggests using a "rule of twenty" when examining rates, where there "should be at least twenty events in the numerator in order to produce a stable rate." The numerators for percentages in this report in most instances are the count of involuntary examinations or the count of people with involuntary examinations. There is no hard and fast rule in this regard, but this rule of twenty provides a concept about when to consider a rate unstable.¹¹

Context Matters: What is being measured matters. For example, if the Department is measuring readmissions to a state hospital over a three-year period, an increase from eight to 16 may have meaning. But if it is measuring deaths by suicide for 12- to 14-year-old youth, this same 100 percent increase from eight to 16 may be meaningful in a different way, and perhaps more concerning. What is occurring at the state level and in the community of focus as it relates to what is being measured needs to be considered. Was there some sort of catastrophic event, such as a hurricane or a severe

¹¹ In addition to the more concise presentation of this issue at the [Stats Indiana site](#), a more detailed discussion about rates with smaller numbers can be found in the [National Center for Health Statistics Data Presentation Standards for Rates and Counts](#) published in March 2023.

economic downturn? How do the characteristics of the community of focus impact what is being measured? Is access to services different between the two communities being compared, such as access to Baker Act receiving facilities?

The key takeaway is that percent change is a quantitative measure. Interpreting its significance and making meaningful comparisons across communities requires a deeper understanding of those communities. The data presented in this report serves as an initial step toward addressing the relevant issues.

There are complex reasons for the lower numbers of involuntary examinations in some areas and higher numbers in other areas. Readers of this report are urged to consider these factors when interpreting the results:

- Number of individuals trained in Mental Health First Aid;
- Law enforcement training, including Crisis Intervention Training (CIT);
- Availability of criminal justice system diversion programs at all sequential intercepts, including those funded by Criminal Justice, Mental Health, and Substance Abuse (CJMHS) Reinvestment Grants;
- Availability and quality of community-based behavioral health services, including Mobile Response Teams (MRTs), Florida Assertive Community Treatment (FACT), and Community Action Treatment (CAT) Teams;
- Availability of a wide array of social services, such as assistance with housing, coverage for health care, and existence of county funds for those who are underinsured or uninsured.

Terminology: Involuntary examinations occur at designated receiving facilities. Receiving facilities may include hospitals (licensed under Chapter 395, F.S.) and Crisis Stabilization Units (licensed under Chapter 394, F.S.). The Department designates all Baker Act receiving facilities regardless of type. Some receiving facilities are called Crisis Stabilization Units (CSUs) and they receive Department funds for Baker Act services. CSUs designated for children are referred to as Children's Crisis Stabilization Units (CCSUs). This means that while all CSUs/CCSUs are Baker Act receiving facilities, not all Baker Act receiving facilities are CSUs.

Unknown/Not Reported Values: The age necessary for analyses by age groups is computed by subtracting the individual's date of birth entered into the Baker Act Data Collection System from the date the person arrived at the receiving facility.¹² Age cannot be determined and is reported as "unknown" if the date of birth is not entered into the BADCS by Baker Act receiving facility staff. The county of residence reported on the Cover Sheet is used to categorize involuntary examinations geographically, such as by Department Region, Managing Entity area, and Judicial Circuit. The *not reported* category for presentation of information by geographic areas means that the county of residence was not reported on the Cover Sheet.

Population Statistics: Population statistics are provided in some tables to put counts of involuntary examinations in context. Population estimates were obtained from Florida Health Charts. While this report focuses on counts by fiscal years, estimates of population are available by calendar year. Logical calendar year spans are used to provide context. For example, we used population statistics for 2023 for FY 2023-2024.

¹² Note that prior to the July 1, 2023, implementation of the Baker Act Data Collection System (BADCS), the date of initiation (by law enforcement or a health professional) and the date of the ex-parte order for involuntary examination was subtracted from the date of birth to compute age. The difference between these dates and the date of arrival used in the BADCS are typically only a few days apart, such that there is not a meaningful difference in the age computed in terms of the aggregate reporting.

Unique Person Identifier: A unique person identifier was created using available data. Social security number could have been used as a unique person identifier if the data were complete enough for this purpose. However, the percentage of missing social security numbers precluded its use as a unique person identifier. *Link King*¹³ software was used to identify individuals and create a unique person identifier using both deterministic and probabilistic matching algorithms. The probabilistic algorithms used by *Link King* were developed by MEDSTAT for the Substance Abuse and Mental Health Administration's (SAMHSA) Integrated database project. The *Link King* program can recognize the use of nicknames, hyphenated names, misspelled names, transposed social security number digits, and transposed date fields. A minimum of first name, last name, and either date of birth or at least the last four digits of the social security number are required for matching. Uncertain matches and a sample of successfully matched records were manually reviewed for accuracy.

Difference Between Report Counts and Dashboard Counts: Note that the counts in this report are different than the counts you will see on the Department's Baker Act Dashboard. For instance, on 11/8/2024 the Department's Baker Act Dashboard shows for FY 2023-2024 a count of 164,114 involuntary examinations for 117,229 individuals. There are two factors that lead to these differences. First, this report was produced with a dataset that the Department provided to the Baker Act Reporting Center in mid-July 2024 for involuntary examinations through June 2024. These data are needed this soon after the end of the fiscal year to provide sufficient time to produce the report draft so that the Department can submit it by the November 30th statutorily required deadline. The data used for the Dashboard include some records for involuntary examinations for FY 2023-2024 that Baker Act receiving facilities entered into the Baker Act Data Collection System after the data were provided to the Baker Act Reporting Center in July.

Second, the Dashboard does not currently use the unique person identifier that the Baker Act Reporting Center creates to count individuals and uses for this report. This unique person identifier can match records of individuals in way that is not possible with the method used by the Department for the data used in the Dashboard. The Department is coordinating with the Baker Act Reporting Center to have them provide the Department with the unique person identifier so that this variable can be used as the basis upon which people are counted in the Dashboard. The Dashboard states that certain, more recent, counts are provisional. The Department could adopt the same unique person identifier as the Baker Act Reporting Center to address the provisional status of the data used for the Dashboard.

Counting Repeated Involuntary Examinations: The unique person identifier was used to count repeated involuntary examinations. Information about repeated involuntary examinations for one-year and three-years are included in this report for all ages, adults, and children. Involuntary examinations for which age is not known cannot be included in tables that report results for adults and children because the age is necessary to categorize individuals into age groups. Also, individuals who had at least one examination as a child and one as an adult during the year were counted in both the adult and child tables. For example, an individual who, during one-year, had two involuntary examinations when they were 17 and one after they turned 18 would count as one individual with three involuntary examinations in the "all ages" table, as one child with two examinations in the child table, and one adult with one examination in the adult table. For these reasons, the counts of individuals and examinations in the tables counting repeated examinations do not add up to the total of individuals and examinations earlier in the report. The counts of individuals for all ages also vary slightly from the combined counts of adults and children. These differences are small and do not impact the overall meaning of the results.

¹³ See The Link King and Rule Your Data with The Link King® (a SAS/AF® application for record linkage and un-duplication)

Guidance to Understand Tables About Repeated Involuntary Examinations:

Note that the example on this page is for one fiscal year for purposes of this example only. The tables with the actual numbers and percentages for FY 2023-2024 (one-year) and FY 2021-2022 through 2023-2024 (three-years) start on page 10 of this report.

As an example, repeated involuntary examinations for one fiscal year are shown in the table below. First, the number of individuals with one involuntary examination is counted, two examinations, three examinations, and so forth on up to the individual with the most examinations in the year. Counts of the number of involuntary examinations in a year is in column number one below. Grouping numbers of involuntary examinations into categories at higher numbers of examinations (such as 6-10 and 11+) is done to avoid reporting small cell sizes. For example, 82,449 individuals (column 2) had one involuntary examination accounting for 76.22 percent (column 3) of individuals with involuntary examinations in FY 2023-2024 and their 82,449 involuntary examinations (column 4) accounted for 51.03 percent (column 5) of the total number of involuntary examinations for the year. For example, the 1,857 individuals (column 2) with between six and ten involuntary examinations during the year accounted for 1.72 percent (column 3) of the involuntary examinations for the year, but their 13,448 involuntary examinations (column 4) accounted for 8.32 percent (column 5) of all involuntary examinations for the year.

The number reported in columns 4 and 5 allows the percentage of involuntary examinations out of the total number of examinations that individuals with various numbers of involuntary examinations account for during the year to be seen.

Example Table: Repeated Involuntary Examinations for All Individuals Statewide in One Fiscal Year

1	2	3	4	5
Examinations in One Fiscal Year	Count of Individuals	Percent Individuals	Count of Examinations	Percent Examinations
1	82,449	76.22%	82,449	51.03%
2	14,359	13.27%	28,718	17.77%
3	4,945	4.57%	14,835	9.18%
4	2,364	2.19%	9,456	5.85%
5	1,199	1.11%	5,995	3.71%
6-10	1,857	1.72%	13,448	8.32%
11-20	402	0.37%	5,466	3.38%
20+	50	0.05%	1,308	0.81%
Total	108,167 individuals		161,576 involuntary examinations	

Appendix C: Change in Statute About Voluntary Admissions of Children

A change to Chapter 394.4625, F.S. after the passage of Senate Bill 1844 (2022)¹⁴ needs to be considered when interpreting counts of involuntary examinations of children. This change may have led to an increase in children being admitted to Baker Act receiving facilities on a voluntary status rather than an involuntary status, meaning that some of the decreases in involuntary examinations of children from FY 2021-2022 to FY 2022-2023 could be accounted for by this change. Some of the decrease may not reflect a reduction of children admitted to receiving facilities. Rather, some of the decrease may reflect children admitted on a voluntary basis whose examinations are not counted in the Baker Act data because those data only include information for involuntary examinations.

¹⁴ Also see Chapter 2022 -41, Committee Substitute for Senate Bill No. 1844.
Baker Act Reporting Center FY 2023-2024 Annual Report

Appendix D: Suicide and Suicide Prevention

If you or someone you know is thinking about suicide, please call or text the [988 Florida Lifeline](https://www.988lifeline.org) at 988 or chat at [988lifeline.org](https://www.988lifeline.org). Call 211 to be linked to a [Florida Alliance of Information Referral Services](#) provider for your community to learn more about resources on a wide array of health and social service needs. The Baker Act Reporting Center also maintains a list of resources that may be helpful (click on [For the General Public](#)).

This appendix provides resources for those interested in additional information about suicide and suicide prevention, as this issue is closely related to the Baker Act. Baker Act involuntary examinations prevent death by suicide, requiring an immediate examination of any individual that expresses suicidal thoughts or engages in suicidal behaviors. In Florida, the Statewide Office for Suicide Prevention (SOSP) and the Suicide Prevention Coordinating Council focus on suicide prevention initiatives such as creating and implementing the statewide plan for suicide prevention and increasing public awareness. The SOSP is administratively housed in the Department's Office of Substance Abuse and Mental Health. Those interested in learning additional information about suicide prevention initiatives and research are encouraged to view the [2020-2023 Florida Suicide Prevention Interagency Action Plan](#) and the [Suicide Prevention Coordinating Council 2023 Annual Report](#).

Following are links to resources relevant to suicide prevention that provide helpful information:

- The 988 Suicide & Crisis Lifeline went live nationwide in July 2022. This includes a phone line that can be reached by calling 988 and the ability to chat by texting. To learn about the 988 Florida Lifeline visit: [988 Florida Lifeline | Caring support, anytime you need it](#)
- Florida Department of Children and Families, [Suicide Prevention Webpage](#)
- Florida Department of Health, [Suicide Prevention Webpage](#)
- [Florida Health Charts](#) dashboard of suicide data
- [Suicide Prevention Resource Center](#)
- [Florida Health Rankings](#)
- The Centers for Disease Control and Prevention Center, National Center for Health Statistics, [Suicide Mortality by State](#)
- American Foundation for Suicide Prevention [State Fact Sheets](#)
- National Institute of Mental Health at the NIH [Suicide Information](#)
- [Suicide Prevention: An Emerging Priority for Health Care](#) article in *Health Affairs* (2016) by Hogan and Grumet is available at no cost to the public and provides an excellent overview.
- Technical issues with data about suicide, including the instability of suicide rates when numbers are small, are addressed by [Florida Health Charts](#) and the [Centers for Disease Control and Prevention](#).
- The Suicide Prevention Resource Center is a resource that readers of this report may find helpful in general, such as a [resource for training](#) and to learn about state activities for [all states](#) and specific to [Florida](#).
- *Zero Suicide is a quality improvement model that transforms system-wide suicide prevention and care to save lives.* This includes resources such as research articles, outcome stories, a toolkit, and training.

Appendix E: Mobile Response Teams (MRTs)

The Marjory Stoneman Douglas High School Public Safety Act, Chapter 2018-3, Laws of Florida, created a statewide Mobile Response Teams network. House Bill 945 (2020) amended section 394.495, F.S., to include MRTs in the child and adolescent array of services, outline programmatic requirements, and expand MRT eligibility to include children who are served by the child welfare system and are experiencing or at risk of placement instability. The Managing Entities contract with providers for MRTs, with statewide access to this service. Additional funding was obtained in subsequent years to expand services to individuals of all ages and increase the number of MRT Teams. Information about MRT is available on the Department's Specialty Treatment Team Maps webpage.

The goals of MRT are to lessen trauma, conduct an independent assessment to determine if the individual may be safely diverted from emergency departments, prevent unnecessary psychiatric hospitalization, and divert from juvenile justice or criminal justice settings. Mobile response services are available 24 hours a day, seven days a week, 365 days a year. In addition to helping resolve the crisis, MRTs work with individuals and families to identify resources, provide linkages, and develop strategies for effectively dealing with potential future crises.

The individual may present with an overt change in functioning or have difficulty coping with traumatic life events. Mobile response teams may coordinate in-person services with law enforcement to provide additional safety when appropriate and necessary.

MRTs provide immediate, onsite behavioral health crisis services at minimum to individuals who:

1. Have an emotional disturbance,
2. Are experiencing a mental health or emotional crisis,
3. Are experiencing escalating emotional or behavioral health reactions and symptoms that impact their ability to function typically within the family, living situation, or community environment, or
4. Are served by the child welfare system and are experiencing or at high risk of placement instability.

Table E shows aggregate counts using data provided by the Managing Entities to the Department. From July 2020 through June 2024 (four years), there were 107,604 calls to MRTs funded by the Department.¹⁵ In FY 2023-2024, there were 31,509 calls to these MRTs. Almost three-quarters (72 percent) of MRT calls required an acute response, of which three-quarters (76 percent) were diverted from involuntary examination, and four percent (978 calls) were diverted to voluntary examination. Eighteen percent of MRT calls originated from schools.

Table E: Statewide MRT Data for Four Years (FY 2020-2021 through FY 2023-2024)

Number of Mobile Response Team Activity	Fiscal Year			
	2020-2021	2021-2022	2022-2023	2023-2024
Calls received	22,146	25,555	28,394	31,509
Calls requiring an acute response	16,612	18,277	20,196	22,609
Calls diverted from involuntary examination	13,466	15,128	16,584	17,091
Acute calls resulting in involuntary examination	3,146	3,118	3,572	4,489
Calls originating from schools	6,296	7,105	6,410	5,550

¹⁵ Please note that there are other types of mobile response or co-responder teams funded by other entities, such as school districts and law enforcement agencies. Counts for these teams are not included in the Table D.

Appendix F: Involuntary Examinations by Receiving Facility

Counts and percentages of involuntary examinations for each receiving facility are shown in Table E for children and adults. Baker Act receiving facilities are listed by the county where the receiving facility is located, then in descending order by number of involuntary examinations in FY 2023-2024. Facility names in the following tables marked with an asterisk (*) were no longer designated by the Department as Baker Act receiving facilities at some point in FY 2023-2024.

Counts of involuntary examinations below 20 and the percentages were redacted for small cell sizes. This redaction of numbers 20 or greater was done by rounding up to the nearest number by fives, then indicating the count was below that number. For example, to redact a count of 32, the table indicates it is <35. For a count of 17, the table indicates it was <20, and so forth.

Appendix G: Involuntary Examinations by Initiating Law Enforcement Agency

Shown in this appendix are counts of involuntary examinations initiated by law enforcement agencies (Table G1), and a list of the 18 law enforcement agencies that did not initiate any involuntary examinations in FY 2023-2024 (Table G2). Almost all (92 percent, 350 out of 381) law enforcement agencies in Florida had at least one officer who initiated involuntary examinations in FY 2023-2024.

Law enforcement may also be involved in the transport of individuals with involuntary examinations initiated via a health professional or ex-parte order. These instances of transportation are not counted in Table G1.

Law enforcement agencies are listed alphabetically in Table G1 by county and agency within each county in descending order of involuntary examinations for all ages. Counts of involuntary examinations below 20 were redacted for small cell sizes. Additional counts and percentages were redacted to eliminate the ability to use total counts and counts/percentages in table cells to determine the exact count of cell sizes that were redacted. These counts were redacted by providing the number of the count rounded to the nearest value by fives. For example, to redact a count of 32 the table indicates it is <35, for a count of 17 the table indicates it was <20, and so forth. This approach minimizes the loss of information that results from redaction.

Table G1: Involuntary Examination by Initiating Law Enforcement Agency – FY 2023-2024

Law Enforcement Agencies	FY2023-2024		
	Children	Adults	All Ages

	Washington County Schools/Florida Panhandle Technical College Department of Public Safety

Appendix H: County Specific Summaries

One-page summaries of information for each county follow. A statewide summary page is provided on the next page so that readers of this report may compare the information on each county page to statewide values. Involuntary examinations were categorized by county according to the county of residence entered into the Baker Act Data Collection System by Baker Act reporting center staff.

Florida

This page is provided to facilitate the comparison of the following pages with county level information to statewide values. In Fiscal Year 2023-2024, there were 161,576 involuntary examinations for 22,685,583 residents of Florida County.

Involuntary Examination Level Analyses

Physicians (who are not Psychiatrists) (64.19%) were the most common health professionals to initiate involuntary examinations, followed by Mental Health Counselors (13.46%), Psychiatrists (7.73%), Clinical Social Workers (6.75%), Psychiatric Nurses (3.57%), Physician Assistants (2.93%), Marriage and Family Therapists (<1%), and Clinical Psychologists (<1%).

Information about involuntary examinations of Florida County residents for five years is shown in Table A.

Table A: Involuntary Examinations: Residents of Florida County for Five Years*

Fiscal Year	All Ages	Percent of Total				Percent of Total by Initiator Type			Percent Change for:			
		<18	18-24	25-64	65+	Law Enforcement	Health Professional	Ex-Parte	1 Year		5 Years	
									BA Exams FY22/23 to FY23/24	Pop* 2022 to 2023	BA Exams FY19/20 to FY23/24	Pop* 2019 to 2023
2023-2024	161,576	18.33%	12.40%	61.18%	7.22%	52.36%	44.53%	3.11%	-6.99%	1.60%	-20.28%	6.66%
2022-2023	173,721	19.39%	12.39%	60.34%	6.98%	53.76%	43.73%	2.52%				
2021-2022	170,047	20.13%	12.83%	59.14%	6.83%	52.96%	44.60%	2.44%				
2020-2021	194,680	19.81%	12.69%	59.26%	6.83%	52.93%	45.02%	2.05%				
2019-2020	202,598	17.75%	12.36%	61.44%	7.30%	51.89%	46.13%	1.98%
