KALTURA EXPRESS CAPTURE
Creating Webcam Videos

Kaltura offers a basic tool to record a webcam video directly within Canvas. This tool is available wherever the RCE tools are available to add media to a course page. This tutorial will walk you through the process of using Kaltura Express Capture.
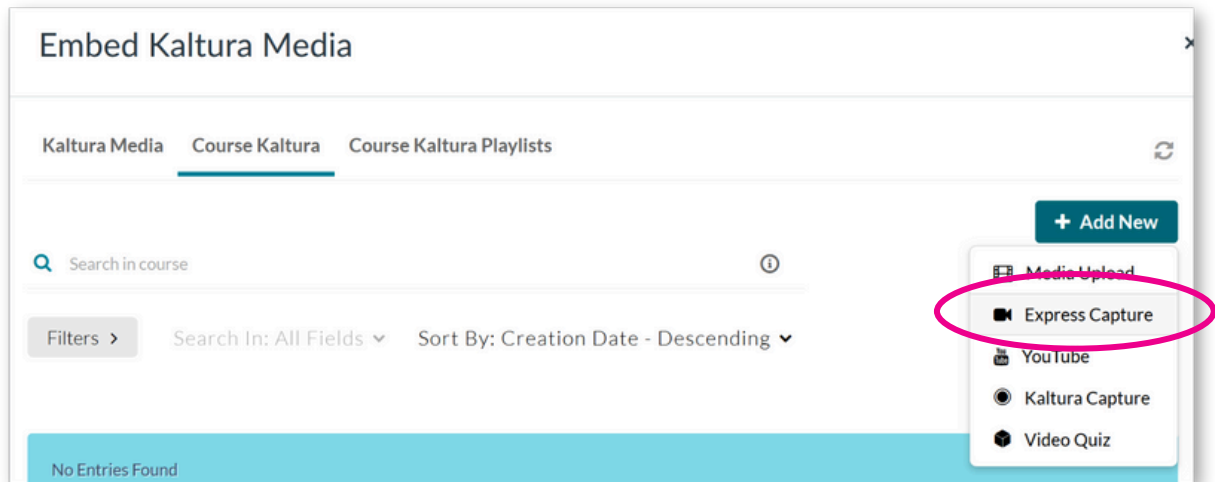

OPEN THE RCE

1 Open the course page where you'd like to add Kaltura media. This can include wiki pages, assignment submissions, discussion instructions, as well as posts and replies within threads. Locate the **Kaltura Media** embed option under the plugin icon in the RCE menu bar.
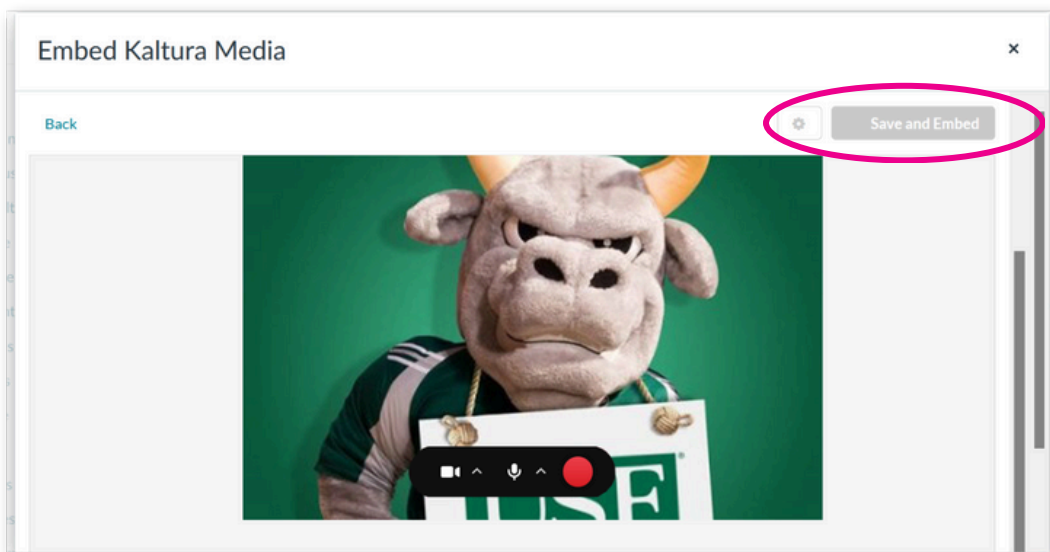

OPEN THE EXPRESS CAPTURE RECORDER

2 Once the Kaltura popup window loads, select Express Capture from the **+Add New** button in the upper right.

3 Record your video in the popup window. You may need to allow Kaltura to access your webcam and microphone to proceed. **Save and Embed** your video on the Canvas page.

4 Finish your edits in Canvas and your video will be embedded within the page content.
